General Contract Information

1. Normal delivery time occurs Monday through Friday from 8:00 am to 5:00 pm Eastern Standard Time (EST).

2. Retail or "Tank Wagon" Delivery Orders

- a. Minimum amount for Tank Wagon delivery is four hundred (400) gallons per delivery. Tank Wagon delivery cannot exceed four thousand (4,000) gallons per delivery.
- b. Standard tank wagon delivery time under this contract is forty-eight (48) hours. Supplier(s) also offer separate rates for expedited tank wagon delivery (24 hour delivery).

3. Bulk or "Transport" Delivery Orders

- a. Delivery orders between four thousand (4,000) gallons and eight thousand and five hundred (8,500) gallons are classified as Transport deliveries
- b. Standard transport delivery time under this contract is twenty four (24) hours.

4. Minimum order quantity surcharge: Standard minimum order quantities under this contract are not less than four hundred (400) gallons. Although orders under four hundred (400) gallons are permissible, supplier(s) will receive a delivery surcharge based on order delivery distance. Surcharge amount will be fifty (50) cents per mile and will be calculated based on the total delivery trip (round trip). Surcharge formula is as follows: *Total Surcharge Amount = Delivery Distance (round trip) X 50 cents per mile*. For example, if customer places and order for two hundred (200) gallons and the delivery distance is twenty (20) miles, one way; the delivery surcharge equals twenty (20) dollars (40 miles X \$0.50/mile).

5. Tank Maintenance: Customers must maintain all tanks and dispensing equipment associated with their facility in good working order for the duration of the Contract.

6. Georgia Environmental Facilities Authority (GEFA):

- a. GEFA manages tank maintenance and installation contracts for all state owned tanks, The Fuel Storage Tank Division of GEFA coordinates annual inspections, maintenance and repairs for all state-

owned underground storage tanks (UST). All tanks are inspected to ensure proper working order and compliance. Systems are adjusted and/or repaired based on diagnostic checks and include: anchoring and electrical systems, manway bolts, fill adaptor and overflow protection equipment, crash protection, tank vents, anti-siphon valves, submerged pumps, tank-mounted pumps, fuel piping, tank decals/signage, emergency fire extinguisher, external fire valves, and spill clean-up kits. Cathodic protection systems are tested to ensure they are adequately protecting the UST. The INCON (Intelligent controls and power reliability system for USTs) system is thoroughly inspected and tested to verify accurate working order.

- b. GEFA conducts a final inspection to ensure that any necessary repair and maintenance work has been completed and that all equipment and systems are in proper operational condition. GEFA provides direct support for the agency and facility during the triennial regulatory tank inspections carried out by the EPD for all underground storage tanks. GEFA staff also co-ordinates the annual tank registration of underground fuel storage tanks required by the EPD

7. Tank Fill Rules: GEFA has or is currently installing tank monitoring equipment systems at all state facilities. If a tank is filled beyond the ninety percent (90%) limit, the probes can be damaged or destroyed. Therefore, if a supplier/s overfill a tank past the ninety percent (90%) level and the probe is harmed, the suppliers will be responsible for the cost of repairs and/or replacement to include any environmental cleanup associated with overflow. Furthermore, all fills must be made using the straight drop method. To get an accurate figure for the gallons dropped customers will need to measure the tank before and after the drop. If you have questions regarding this policy please contact the contract Issuing Officer.

8. Pricing

- a. The price of the fuel commodity itself, will be determined using the **OPIS Contract Net Average Price** from the closest supply point terminal to the customer delivery location, on the date of delivery to the customer, regardless of when or where the Supplier/s actually obtains the fuel. The following are approved supply point terminals for this contract as referenced on OPIS Price Reports:

Athens
Doraville
Macon

- b. Fuel Surcharge: The State and Participating Entities will implement a fuel surcharge in order to compensate for freight rate volatility. For instructions to use Fuel Surcharge, please refer to Ordering Instructions.

Contract Renewals/ Extensions/ Changes

1. RENEWAL:

Effective Date of this Renewal Notice: April 1, 2012

Initial Effective Date of Contracts: April 1, 2010

Expiration Date: March 31, 2013

All contracts have been renewed for an additional year with all eight (8) suppliers, at the same prices, terms and conditions.

Contract Ordering Instructions

Step 1: Determine the method of delivery (standard or expedited) and click the link for the appropriate Region from the Type Delivery and Location Matrix <[click here to view Matrix](#)> based on the location of the county where delivery will be made. If you need to determine in which of the 12 Regions the county is located, please review the map of Georgia <[click here to view the map of Georgia](#)>.

Step 2: From the Regional Price Sheet

- (a) Locate the county where delivery will be made (counties are listed in alphabetical order) and determine the type of fuel desired.
- (b) Determine the mark-up/discount per gallon for the county based on the type of fuel desired from the appropriate column of the price sheet
- (c) Determine the delivery rate per gallon for the county based on the type of fuel desired and the size/type of order (tank wagon or transport) from the appropriate column of the price sheet
- (d) Determine the Supplier for the county based on the type of fuel desired from the appropriate column on the price sheet. Supplier contact information can be found on the Vendor Information Sheets (pages 2 – 9 of this document) or by using the hyperlinks on the Statewide Contract Information Sheet (page 1).

Step 3: Obtain the OPIS Contract Net Average Price for the type of fuel desired from the State Purchasing Division Daily Petroleum Report located at the following weblink:

<http://ssl.doas.state.ga.us/PRSapp/statewide/SWC20448.pdf>

Step 4: Determine the Total Mark-up per Gallon by adding the following values together;

- Markup/Discount per Gallon (from Step 2b),
- Delivery Rate per Gallon (from Step 2c)
- OPIS Contract Net Average Price (from Step 3).

Total Mark-up per Gallon =

Mark-up/Discount per Gallon + Delivery Rate per Gallon + OPIS Price
(from Step 2b) (from Step 2c) (from Step 3)

Step 5: Determine the Total Fuel Cost by multiplying the Total Mark-up per Gallon (from Step 4) by the Total Number of Gallons required.

Total Fuel Cost = Total Markup per Gallon X Total Gallons Required
(from Step 4)

Step 6: Determine the fuel surcharge. Suppliers are entitled to a fuel surcharge, which will be added as a separate line to the purchase order.

- (a) Go to U.S. Energy Information Administration website
<http://tonto.eia.doe.gov/oog/info/wohdp/diesel.asp>
- (b) Select the TAB for "**Average All Types**" (highlighted in **BLUE** once selected):
- (c) Determine the Weekly Retail On-Highway Diesel Price for **Lower Atlantic** (subcategory of U.S. / East Coast): **NOTE: Most recent prices reflected in 3rd column from the left**
- (d) Go to Fuel Surcharge Index Table <[click here to view the table](#)> and locate the fuel index range in which the weekly retail on highway diesel price falls to determine the Surcharge Percentage .
- (e) Use the formula to calculate Fuel Surcharge Amount for the specific order (Note: this is a flat fee and IS NOT based on delivery distance):

Fuel Surcharge Amount =

Delivery Rate per Gallon X Surcharge Percentage X Total Gallons
(from Step 2c) (from Step 6d)

Example Fuel Surcharge Calculation:

According to U.S. Energy Information Administration website, Weekly Retail On-Highway Diesel price (Lower Atlantic) for week 01/11/2010 is \$2.864. This price falls within the fuel index range of 2.820 – 2.889 on the Table, therefore, the surcharge percentage is twenty five percent (25%).

Let's assume the order is for 5,000 gallons and the delivery rate per gallon is \$0.03. The Surcharge Amount per Gallon is \$0.0075 computed as follows; Delivery Rate per Gallon (.03) X Surcharge Percentage (0.25 or 25%). The Total Fuel Surcharge for the order is \$37.50 computed as follows; Total Gallons Ordered (5,000) X Surcharge Amount per Gallon (\$0.0075). A total of \$37.50 will be added to the total fuel cost. This is a flat fee and IS NOT a per mile fee based on the distance

Step 7: Determine Total Order Amount by adding the Total Fuel Cost (from Step 5) to the Fuel Surcharge Amount (from Step 6e) and contact the Supplier (from Step 2d) to place the order <[click here for supplier info](#)>

Total Order Amount =

Total Fuel Cost + Fuel Surcharge Amount
(from Step 5) (from Step 6e)

Fuel Surcharge Index Table
